Mark, can you help me with a few questions?

Do you know the quantities of Anhydrous and the size of the storage tanks? How many tanks?

What was their process for the Anhydrous?

How many additional tote/tanks did they have and that contained Anhydrous?

Did West use NH₃ in any process?

Any Nitric Acid onsite? And quantities?

How was the NH₃ sold or used in the process, to the farmers, how was it stored and what was the quantities sold to the farmers?

How was the Ammonium Nitrate being used and how was it stored? What was the quantities on hand? How was it used in the process?

Thanks,

Vr,

Gary Files
